ACKNOWLEDGEMENT

First and foremost, we have to thank our research adviser and coordinator, Ms. Khatalyn Mata. Without her assistance and dedicated involvement in every step throughout the process, this paper would have never been accomplished. We would like to thank you very much for your support and understanding over these past years.

We would also like to show gratitude to our panels, including Ms. Marian Rose Yu, Mr. Francis Atienza and Mr. Erwin Marcelo for their direction, dedication and invaluable advice along this project. We would also like to express to express our deep appreciation to our professors Mr. Richard Regala and Mr. Garry De Gracia for sharing their knowledge and unwavering support and help. Importantly, we would like to convey our gratitude to all the participant professors, coordinators and students who formed part of this study.

We would also like to thank our parents for their wise counsel and sympathetic ear. They are always there for us. Finally, there are our friends. We were not only able to support each other by deliberating over our problems and findings, but also happily by talking about things other than just our papers.

 And finally, last but by no means least, we would like to thank Almighty God in giving us such wonderful gifts and blessings.

Thank you very much everyone!
